

# THIS IS WHY WE'RE DOING THIS....

- Dear fellow data collectors.....
- Please find attached the MSKPN DATA with quotes from individual patients and the Number of individuals involved
- Feel free to use it on your marketing as you choose...
- PSFS
- NRS
- Groc
- PASS

# 0 - 6/12 results for MSKPN - PSFS

- Patients show continuous improvement in their key functional activities as their treatment progresses

2,900 patients at six weeks into their physio

1,800 patients at three months into their physio

880 patients six months after starting physio

# Functional Outcome at six weeks to three months

- A great service with continuous improvement and benefits
- My calf muscle feels normal again and I am able to run for the distance I want. I also feel I now know and understand how to improve my calf strength with the exercises given to me. (6 weeks)
- I've already recommended you!! You've got me on a positive path back to running and walking and have made me think twice about cortisone injections and surgery. Thank you! (6 weeks)
- There is an improvement that I can really feel (3 months)
- Now able to play golf and do gym work pain free. I have kept up the exercises which maintains flexibility. (6 weeks)
- Great Physio and seeing improvements already after a few weeks (6 weeks)

# Functional Outcome at six to Twelve months

- My ankle / collapse arch has no pain and I am able to balance and operate as per normal (thank you). Furthermore, I am able to play football and run at the gym and the park with no complaints during or post activities. (12 months)
- **Very happy with my treatment and now fully recovered.**
- Physiotherapy is manifestly working and improving my use of my arm
- **I see a lot of improvement and I have learnt how to exercise on my own in order to make my legs stronger**
- X is brilliant and helped me to to recover from a long term injury.
- **My knee feels much stronger and I am able to do 95% of what I did prior to my fall.**
- A thoughtful and individual approach to my rehab to get me back to full fitness

# Pain (NPRS) Outcome at six to twelve weeks

- On Average patients reported a 43% decrease in their level of pain after 12 weeks.
- (40% decrease after 6 weeks)

2,800 patients at six weeks into their physio

Respondents: 2887

1,700 patients at three months into their physio

Respondents: 1753

# Pain

- Clinician saw me on short notice, diagnosed the issue and made huge difference to my pain levels in just one visit. I was visiting from out of town and he made me able to attend the event I had travelled down for. Continued excellent care all round!
- I am in less pain and I am improving my overall mobility. Very professional service
- I could not have asked for better rehab post a very big surgery
- Excellent clinicians with a genuinely patient centric approach. Professional and exemplary service from both clinicians I have seen, clearly highly experienced and skilled. Thank you

# NPRS. At 6 months to 12 months
